

AIA Georgia and Greyter Water Systems
 Invite you to attend a presentation on:

Water Reuse Solutions and Best Practices for Commercial & Residential Buildings

(Receive 1 hr AIA LU/HSW credit)

Presented by:	John Bell, Greyter Water Systems & Former Host of TV's World's Greenest Homes
When:	February 24th – 5:30 to 7:00 PM
Where:	Valdosta Room, Sheraton Atlanta Hotel
Address:	Sheraton Atlanta Hotel, 165 Courtland Street NE, Atlanta GA, 30303
Cost & rsvp:	\$20 for AIA members, \$30 for AIA non-members (includes a cocktail/beverage ticket) RSVP: http://www.aiaga.org/event/2072173-water-reuse-management-solutions-and-practices
Map Link:	Google Maps: http://goo.gl/IYJdTB
Greyter Web:	www.greyter.com

During this seminar you will learn:

- What sources of greywater are most appropriate for re-use?
- What is the best practice for design and how are greywater systems sized for various building types?
- What are the plumbing requirements for installing a greywater system?
- What regions in North America allow greywater recycling?
 - ✓ State/provincial restrictions
 - ✓ Water regulations and standards
- What are the major components, costs of a greywater system what is the installation process?
- What are the benefits of greywater recycling for municipalities, land developers, and home owners.
- How does on site water treatment can create incentives for builders and developers.

“ John’s discussion regarding greywater recycling and rainwater harvesting is very timely for our members as the future for water stressed regions like Georgia lies in managing water more efficiently.

Marci Reed, Executive Director of AIA Georgia

“ For more than 20 years, Georgia, Alabama and Florida have been disputing what is known as the Tri-State Water Wars. Water supply and allocations relating to Atlanta’s water life lines lie at the heart of this battle. In addition to supply issues, Georgia will require nearly \$100 million in water and wastewater infrastructure upgrades over the next 20 years. Thus, efficient water resource management practices within Commercial and Residential Buildings can significantly reduce pressures on water and the services it provides.

John Bell, VP of Business Development, Greyter Water Systems

John is V.P. Business Development and co-Founder of Greyter Water Systems. John has been actively involved in the water conservation and greywater recycling industry since 2009. As a sustainable renovator and energy evaluator, Bell has worked in the construction industry for nearly a decade, project managing renovations and new builds. John was the former host of Discovery’s World’s Greenest Homes and is regularly sought out as a featured speaker at conferences and trade shows such as the North America Water Reuse Conference, Sustainability Applied, OCWA Technology Showcase and the Ontario Home Builders Association.
