List: \$65,570.00  
GMIS: \$52,456.00  
Save: \$13,114.00

ThinkGard is not a storage company or software company trying to do DR.  
We only do Intelligent Disaster Recovery. From virus mitigation, hardware failure to site loss, we plan and mitigate for numerous types of situations, including CryptoWall/CryptoLocker virus and complete hardware failure.

The 3 most common types of mitigation are: file recovery, server recovery, or data center recovery. We engineer based off the existing infrastructure, size accordingly, provide onsite installation services if needed, document step-by-step recovery processes, monitor backups/alert failures and test yearly. This is more than a turnkey service, this is Managed Business Continuity. We truly believe in client relationships, so if ever needed, we are available without annoying phone menus. All installations come with our Process/Procedure documentation, and the phone number for ThinkGard's live tech support-located in Birmingham, Alabama. We have existing partnerships with other security focused companies in the industry, as well as federal agencies. Our ThinkGard team is committed to the success of GMIS members, and are proud to sponsor GMIS International and its State Chapters.
