Farm King Expands Liquid Fertilizer Product Line

LOUISVILLE, KY – February 13, 2013 – A new addition to the Farm King Application Equipment division will be introduced this week at the National Farm Machinery Show in Louisville, KY. The new model, a 60' liquid fertilizer applicator, compliments and enhances the product offering.

Custom Tank Designs

Two tank configurations are available. The Model 1860 features an 1800 gallon tank while the Model 2460 has a 2400 gallon tank. The asymmetrical tank design features a hopper bottom style sump designed specifically by Farm King for this application. The tank design minimizes variances in tongue weight and toolbar down pressure despite diminishing tank levels. Additionally, the low center of gravity maximizes wheel tracking stability on side hills.

Raising the Bar

The toolbar is an exciting innovation from Farm King with an impressive 36" crop clearance. This allows for later season liquid application, widening the application window for fast-growing crops. When turning on the headlands, the toolbar lifts vertically and then rotates forward to provide industry-leading 54" of crop clearance. The ground contour following toolbar maintains consistent application depth, even in challenging field conditions.
