

Flexifinger, USA Inc., a wholly owned subsidiary of Flexifinger QD Industries Inc. announces the acquisition of the exclusive license to manufacture and market Robo's rotating rock picker, the world's first rotary Rock Picker. This rock picker is the revolutionary design of Kent Roessler of Anoka, Minnesota. This rock picker is being marketed under the Flexifinger banner as the Flexifinger[®] Quicker Picker. The Flexifinger[®] Quicker Picker makes rock picking fun. The Flexifinger[®] Quicker Picker has been a crowd stopper at trade shows across North America and at Agritechnica in Hannover, Germany.

Dave Dietrich, President and Chief Executive Officer of Flexifinger QD Industries Inc. stated that he had been creating a rock picker in his mind for his own farm when he spotted the Rotary rock picker at the National Farm Machinery Show in Louisville, KY. The rock picker so closely resembled what he had envisioned he no longer needed to do the designing. He could see the potential for this rock picker so clearly that he purchased the right to manufacture and distribute the it. The Flexifinger[®] Quicker Picker will be available through Flexifinger's extensive dealer network in Canada, the United States and around the world.

Flexifinger QD Industries Inc. was seeking to add to its innovative line of crop lifters all designed to use the QD[™] attaching system which makes attaching, removing and then attaching other lifters a quick and easy operation minimizing down time. Founded in 2005, Flexifinger QD Industries Inc. has grown from a farm based business to the international company it is in nine (9) short years. The Flexifinger[®] Quicker Picker fits neatly into our vision of serving farmers, helping them farm more profitably.

Our innovative, award winning lifters are now used around the world; they have become "The Choice of Mechanized Farmers Worldwide[™]".
