

DuroFloat™ Billets

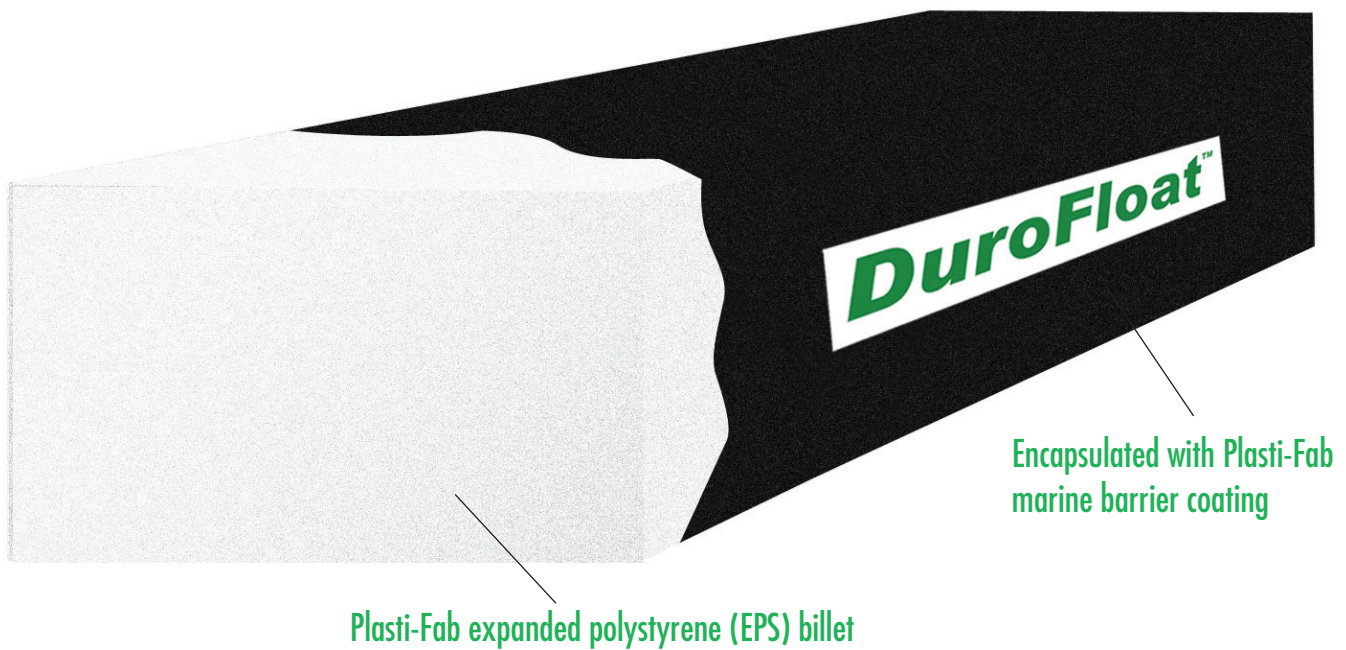

The DuroFloat™ billet consists of closed cell expanded polystyrene (EPS) encapsulated with Plasti-Fab's eco-friendly marine barrier coating. The marine barrier coating resists petroleum spills, UV deterioration and provides protection from mammals, aquatic life and weather.

The closed cell encapsulated billets are produced in a standard size of 10" x 20" x 96" and can be used as a flotation medium for a variety of designs for docks, marinas and rafts.

Size 10" x 20" x 96"	Lift (Buoyancy Force) 610 lbs.
--------------------------------	---

Other sizes available upon request.

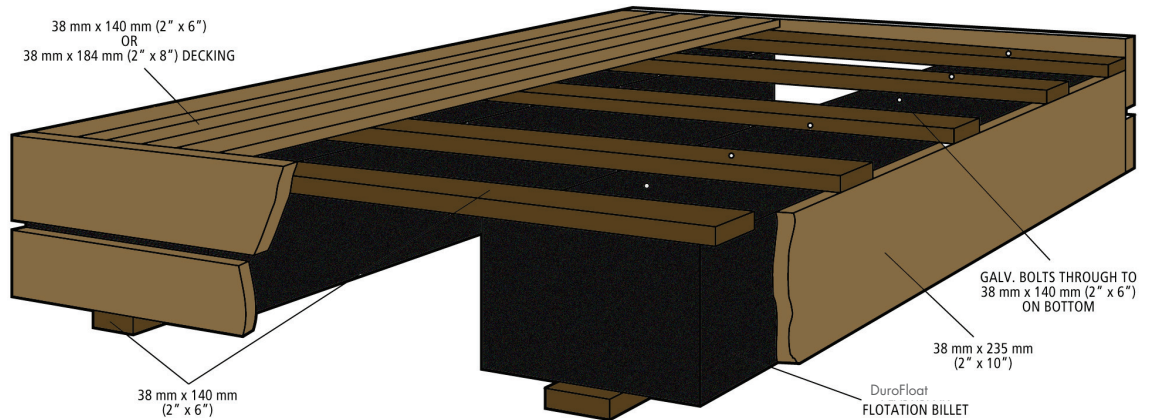

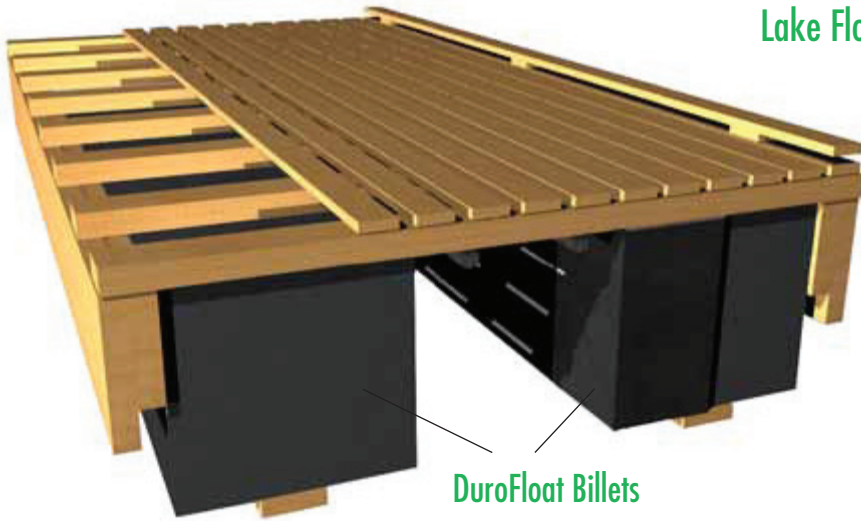

Plasti-Fab expanded polystyrene (EPS) billet

Encapsulated with Plasti-Fab marine barrier coating
