

Newton Group Ltd. Enters 2020 with a New Website

Newton Group Ltd. has begun 2020 with a clear vision and a clear new website to showcase their vertically integrated approach to redefining typical methods of construction. Their areas of expertise, as defined on their Home page, is the Design-Build of Parking Structures, Net-Zero Buildings, Industrial, Commercial and Institutional projects.

Also clearly outlined on their new Home page is the company statement: “Where Innovation, Technology & Integrity Come Together.” This is embodied through their innovative “Building System” approach to the construction industry. Newton Group Ltd. envisions the efficiencies of the Manufacturing industry for the Construction industry. Having a predefined approach allows Newton Group Ltd. to invest in prefabrication techniques for producing integrated steel and precast building elements.

Newton Group Ltd. currently has two building systems which can now be effectively showcased on their website:

- The CANADACAR System for Parking Structures
- The KiwiCondo/Commercial for Energy Efficient Multi-Residential and Commercial Office Buildings.

The newly launched website showcases the company’s expertise and elaborates on the Building System approach to construction. Individual pages outline the CANADACAR Parking Structure System, and the KiwiCondo/Commercial System allowing visitors to read through the benefits of each prefabricated and integrated method.

The favoured page of the new website is their Project Finder page which interactively allows visitors to filter through past projects based on certain categories. The featured projects on the page open up to a full project profile which is a testament to the amazing projects completed by Newton Group Ltd.

About Newton Group Ltd.

Based in Guelph Ontario, Newton Group Ltd. is a vertically integrated General Contractor focusing on developing and constructing Building Systems and bringing efficient methods of construction to the industry through the use of modular construction and prefabrication.

Newton Group Ltd. owns and operates their own Precast Concrete manufacturing plant, as well as their own Steel Fabrication shop. This vertical integration of services allows Newton Group Ltd. to provide clients with 'one source' solutions for all their development needs. By maintaining full control of production and employing in-house capabilities for engineering, design and system manufacturing, the overhead and risk is reduced which directly and positively affects the overall job cost.
