

How do Vactor Hydrovacs Keep Operators Safe?

For [Vactor](#), operator safety is a basic engineering philosophy. Take a look at the infographic to see how [Vactor hydrovacs](#) keep operators safe.

[Contact us](#) today for more information and to [arrange a demo](#).

1 EMERGENCY-STOP WRIST STRAP

Worn on the operator's wrist, the emergency-stop device communicates directly with the wireless remote control on the Vactor HXX truck via Bluetooth technology. A locking ring on the wrist strap connects the emergency-stop device to the digging lance. The wrist strap also features a magnetic connection tethered to the ring. When the digging lance is dropped, the magnetic connection is broken.

2 WATER SYSTEM WITH DIGRIGHT TECHNOLOGY

The standard water system is rated at 10 gpm @3000 PSI* (37.85 L), the maximum pressure recommended for safe excavation.

3 KILL SWITCH

A Kill Switch is located in multiple locations - the truck, pendant and remote for maximum safety.

Joe Johnson Equipment is committed to the safety of hydrovac operators. Call us today to learn more about our lineup of new, used and rental Vactor hydrovacs.
