

Subsurface Utility Engineering (SUE) State of the Practice Survey

The Centre for Advancement of Trenchless Technologies (CATT) is conducting a survey to better understand the current state of Subsurface Utility Engineering (SUE) practices, barriers, and acceptance across Canada. Knowledge and information gained through this survey will:

- establish the industry baseline with respect to SUE knowledge, application, usage, barriers, and value; and,
- track stakeholders' (i.e., owners, and service and technology providers) perspective on adopting SUE practices to reduce construction risks and costs, as well as to improve workers' safety.

The survey will take about 10-15 minutes to complete. Please take the time to complete the survey at <https://www.surveymonkey.com/r/sue18>

After completing the survey, we ask that you pass it on to appropriate associations and organizations in the Utility industry. We need your help to get the most survey responses possible.

The collected data will be used in aggregation and respondents' information will be kept confidential. If you have any questions regarding this study or would like to have additional information, please contact Rizwan Younis (email: ryounis@uwaterloo.ca Tel: 519 888 4567 x36189).

We thank you in advance for your assistance with this study and believe that the results of this study will be beneficial for all the stakeholders.
