

The **vLoc3-Pro utility locator** introduces innovative tools for locating buried utilities assuring damage prevention. With two sets of 3D antennas, signal distortion is easily detected and displayed on the color display. Along with classic locate screens, the vLoc3-Pro locator offers locate screens of Vector Locate for automatic non-walk over locating, Transverse Graph showing peak and null simultaneously providing an immediate measurement of signal distortion, Plan View showing the orientation of the cable at any angle, and a graphical Sonde screen with guidance arrows leading to the sonde location even when it is vertical.

The user configurable locator has eight passive modes, fault-find, SD (showing the direction of outgoing current), and a range of configurable frequencies from 16Hz to 200 kHz. Audio and mechanical vibration alerts can be configured by the user providing warnings for shallow depth, overload, overhead cables, and excessive swinging.
