

ECI Announces Executive VP David Anderson's Retirement

After 32 years with ECI and almost 40 years in the industry, Dave Anderson is retiring as ECI's Executive Vice President. Dave was ECI's seventh employee and has played a significant part in our growth to almost 800 people in 23 offices. He has worked with utilities and energy developers throughout the country and has been responsible for design and management of many of ECI's largest transmission projects as part of these efforts. He has also led the efforts at ECI to create long-term alliances with many of the industry's top leaders in material supply and production, transmission & substation construction and professional services such as geotechnical, aerial survey and inspection required for engineering and EPC construction projects.

Dave has been active in many industry associations including ACSE, IEEE and IR/WA. He has served on numerous committees as well as multiple terms as a Trustee of the Northwest Public Power Association (NWPPA). In addition, he was a familiar face at the Engineering & Operations Conference for over 35 years and very much enjoyed his E&O Committee participation and sponsorship of the annual event. Dave and his wife June are planning on splitting their newly found free time between their Billings home and Red Lodge cabin, both in Montana, and their new home on the south shore of Kauai in Kalaheo, Hawaii.
