

Industrial Minerals Teacher Workshop

TMRA, in a partnership with TACA, hosted a 5-day professional development opportunity for 25 teachers from across the state of Texas. The workshop focused on the mining of aggregates and included tours of a quarry, concrete facility, and cement plant. Educators learned from industry experts via presentations and field work. Educators used their new content knowledge to explore a plethora of hands-on classroom activities tied directly to the Texas state standards.

Pictures below are from the Industrial Minerals Workshop, which would not have been possible without TACA support.
