

Fire Data Analyst Meeting

August 22, 2022, 8am – 5pm

San Antonio, TX

Today's fire service is making more and more data-driven decisions. The collection and analysis of data to make these decisions have become a new field in the fire service organization. It has been realized that there are no standardized methods for this new analysis role across fire departments. The National Fire Protection Association (NFPA) is developing standards around the Fire Data Analyst position.

The International Association of Fire Chiefs (IAFC) along with Esri will be hosting a one-day Fire Data Analyst meeting to cover the role of this position and how different technologies can help with better analysis.

The meeting will be held in conjunction with the IAFC's Fire-Rescue International conference on August 22, 2022, in San Antonio, TX from 8:00 am – 5:00 pm. Breaks and lunch will be provided, and seating will be limited. Pre-registration is required, and no walk-ins will be allowed due to space constraints. For more information and to register visit:
